

STREAM™ Interactive For Airlines

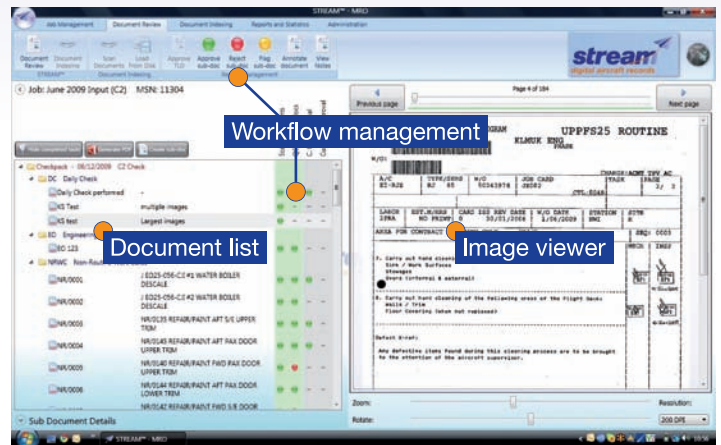

“**STREAM™ provides the perfect solution for our records management and archiving needs.**”

Paul Hodson, Head of Engineering and Planning at easyJet.

STREAM™ Interactive gives you the power to manage your records by combining the latest developments in IT with the power and flexibility of the internet.

STREAM™ Interactive delivers a centralised solution to records management, allowing all departments to communicate internally and externally with ease. STREAM™ Interactive caters for day to day records with several point of entry choices: Linestation, Hangar or Records Department.

STREAM™ Interactive works within existing infrastructure to give you low system entry costs with little or no interruption to your current day to day operation.

Description

A STREAM™ Interactive license allows an airline of any size to scan, index and share access to its records in a standardised and secure format. The airline can utilise its own scanning equipment and manpower with the fast and secure web-based infrastructure ensuring all its records are available and fully protected.

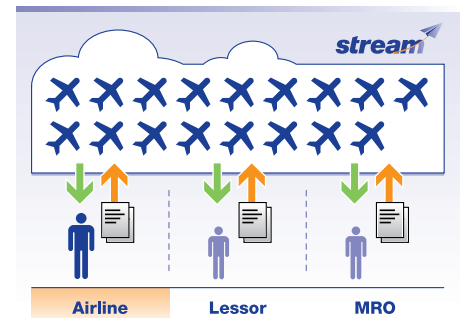

System Requirements

Document scanner, PC & internet connection.

Benefits for Airlines

- ▶ Semi-automated Linestation and office based document capture and processing
- ▶ Full text and barcode search locates documents quickly and accurately
- ▶ Integration with Maintenance Software for closed-loop documentation processing
- ▶ Interact with leasing companies for pre-transition assessment and workflow
- ▶ Interact with MROs for real-time updates from maintenance visits

Technical Records on Demand.

For Airlines, Lessors & MROs.

“Your aircraft and engine records management solution.”

Waviatech Company Background

Waviatech specialise in records management and support for the aviation industry.

We have developed the STREAM™ software and a network of scanning partners to assist with this challenging and increasingly global task.

Since 2002 we have been working with Airlines, Lessors and MROs to deliver our unique combination of services and software.

STREAM™ (Secure Technical Records for Electronic Asset Management)

STREAM™ has been developed by Waviatech to be an industry leading system for managing the ongoing issue of Aircraft and Engine documentation.

Over 300 aircraft equating to \$12.6 billion worth of assets are already protected for lessors and aircraft operators using the STREAM™ system.

Waviatech provides a global scanning and format conversion service or alternatively, records can be routed to our UK bureau for processing. STREAM™ is also available as a licensed software product via STREAM™ Interactive.
