

PRESS ANNOUNCEMENT

Compass Airlines choose Waviatech's Stream software

London, November 21st 2007

Compass Airlines, based in Chantilly, VA, has become the launch customer for the licensed version of Stream – Waviatech's next-generation software tool developed for the scanning, searching and retrieval of aircraft and engine records.

Waviatech installed its first on-site Stream license at the Virginia-based carrier in September shortly after the airline commenced operations. Stream is being used by Compass to scan, index and content manage records for the airline's entire fleet and is already in use on the first six of a total of 36 Embraer 175s on order.

Commenting on the announcement, Stacy Desrosier, Manager Records and Technical Compliance at Compass Airlines, said "We were in need of a solution to help manage our growing records library. Stream allows us to scan new records directly upon receipt, which helps simplify the archive process, and provides our team with instant access to records right from their PCs."

Godfrey Ryan, Director, Sales and Marketing at Waviatech, says, "We are delighted to announce this partnership with Compass Airlines. Stream is already well established amongst the airline and leasing communities through our global records-scanning service. This however marks the first Stream license to be deployed at a customer location and following the installation and first 2 months of use, Stream is delivering digital records management to this forward-thinking airline with great success."

About Compass Airlines

On April 24, 2006, Compass Airlines officially opened its doors as a wholly-owned subsidiary of Northwest Airlines, Inc. Based in Chantilly, Va., Compass operates 76-seat Embraer E-175 regional jet aircraft and is focused on providing safe and reliable air transportation and great customer service. Although Compass is a new entrant in the air transportation industry, the company is growing rapidly. Compass expects to operate a fleet of 10 aircraft and employ more than 300 people by the end of 2007 and a fleet of 36 aircraft by the end of 2008. For more information, please visit Compass Airlines' Web site at www.compassairline.com.

About Waviatech

Our mission, with Stream, is to define the global standard for digital aircraft records”

Stream was developed by Waviatech to assist airlines and aircraft leasing companies in managing scanned historical aircraft and engine records. Since 2002 Stream has established itself by delivering high-quality, easy-to-retrieve and searchable digital records. Stream can be accessed on DVD, online or via a corporate network. Waviatech provides a number of services including a global records-scanning/processing service, aircraft technical records audits and aircraft inspection services. More information can be found on www.waviatech.com
